# 2D Scene

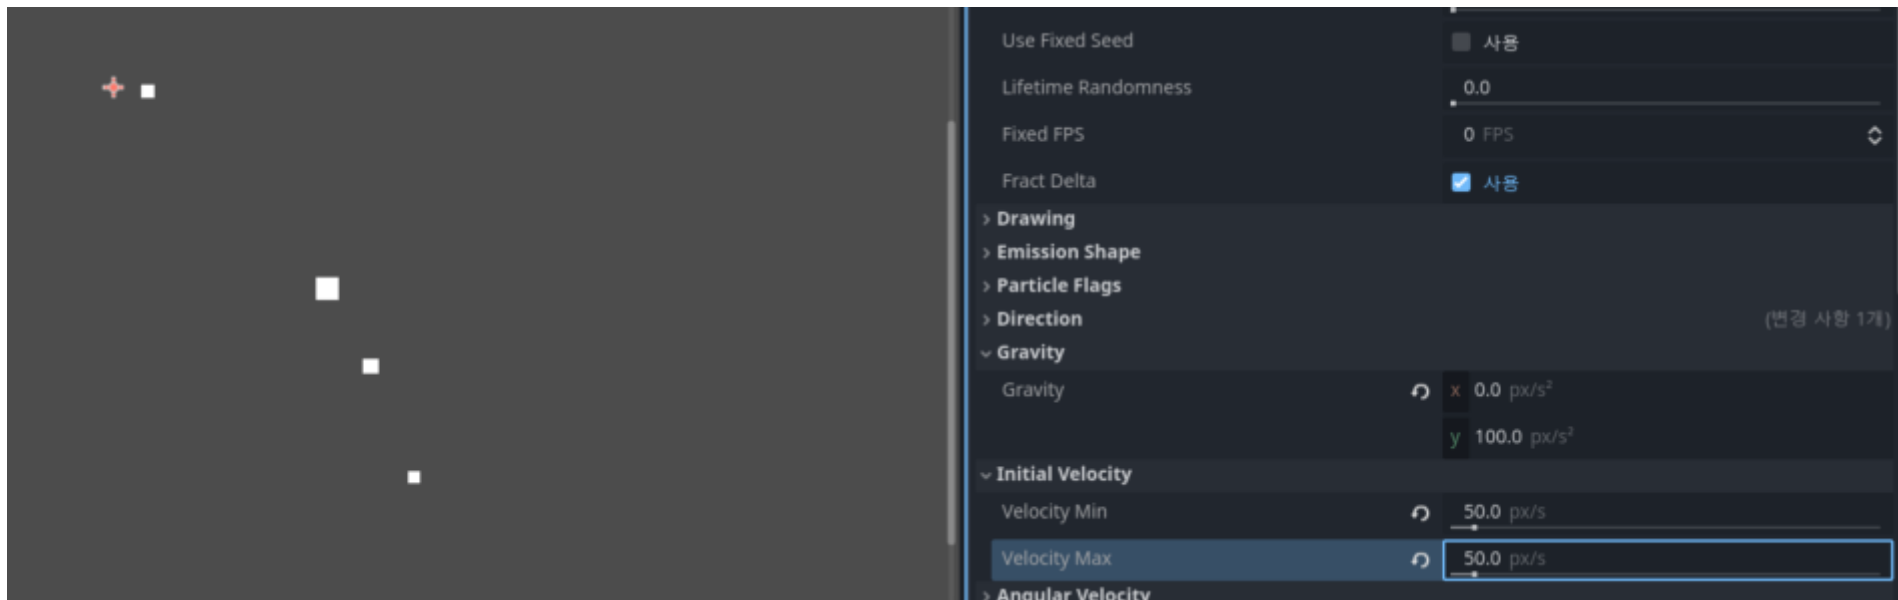

# GPU Particle Process Material

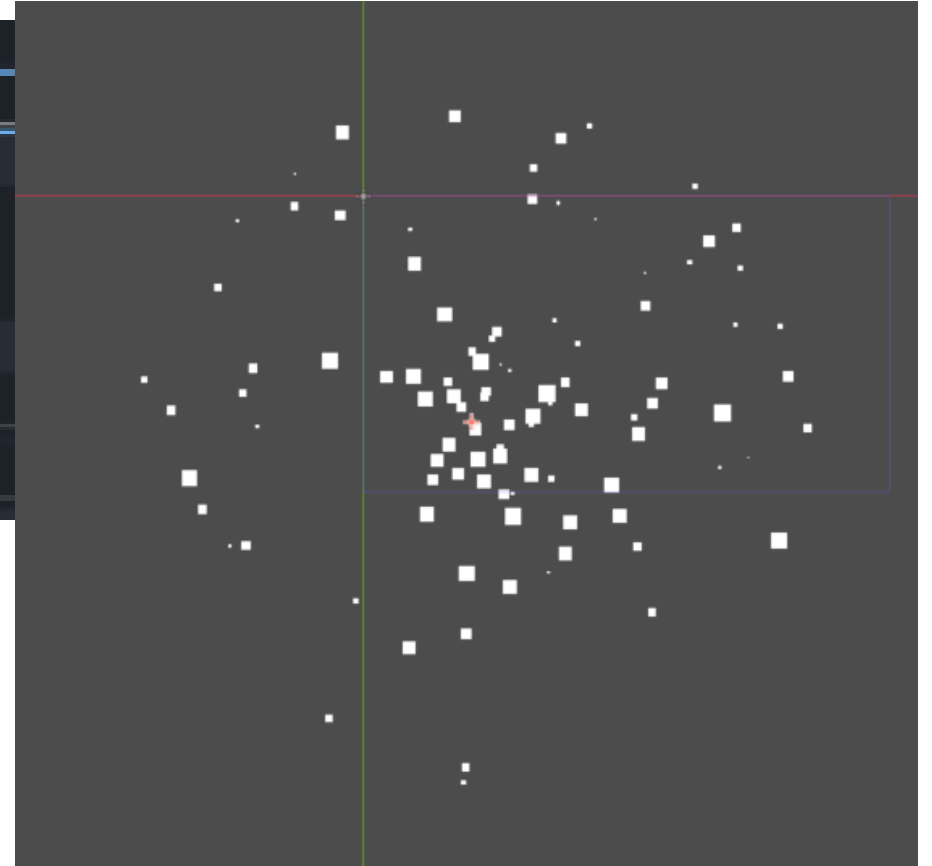

## CPUParticle2D 연습

# 시작 속도

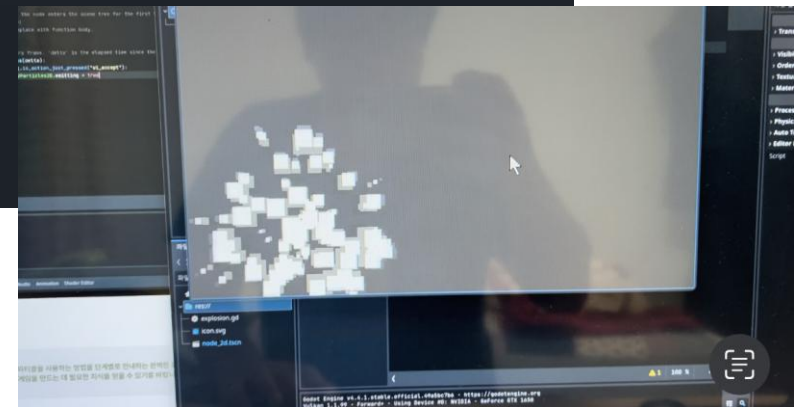

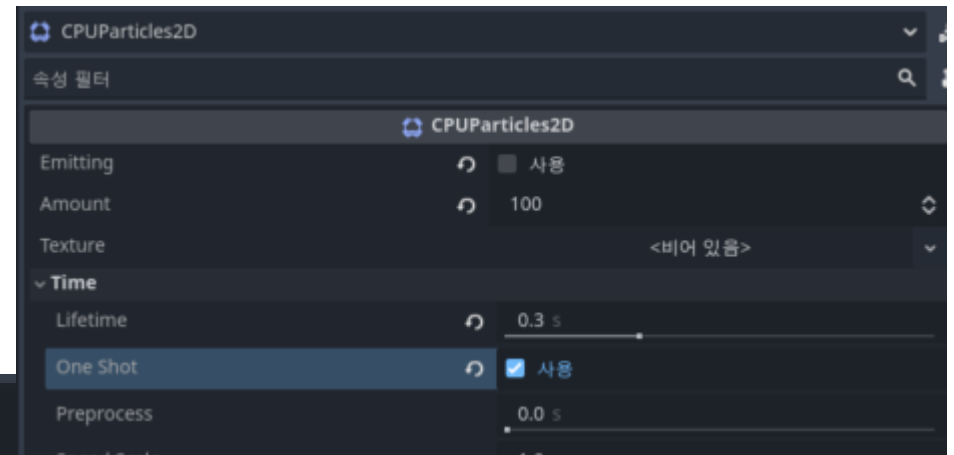

# 폭발 효과 – spread

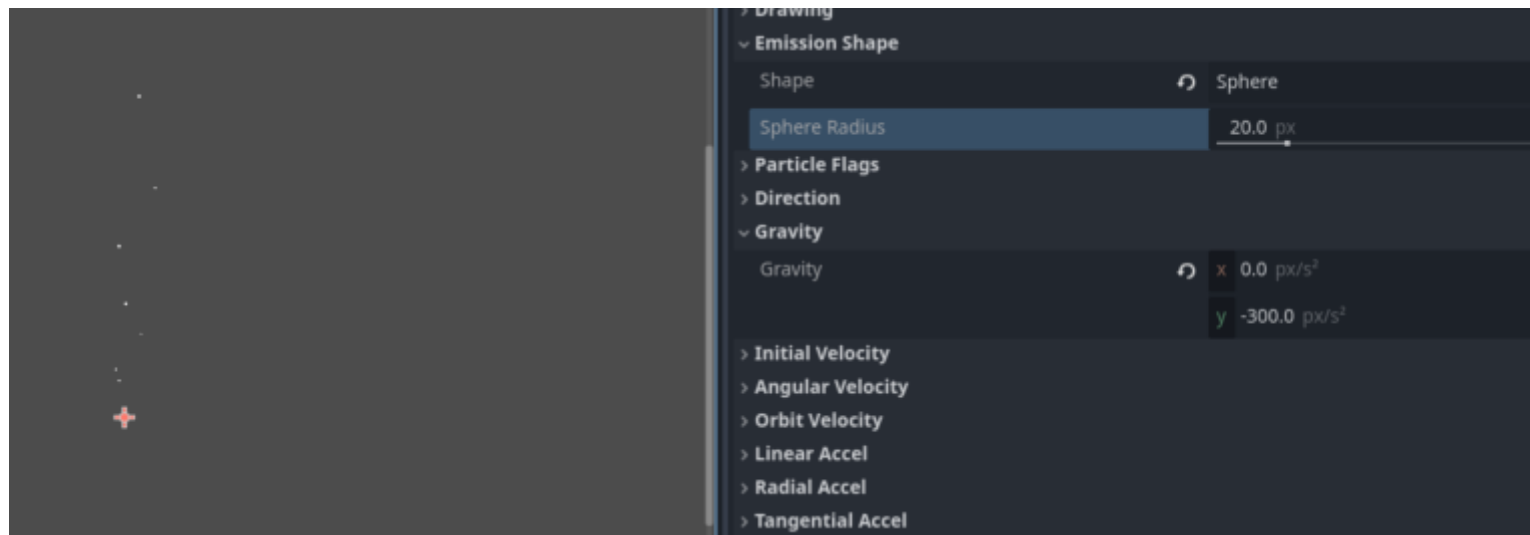

# 필요에 따라 터지게

```
1 extends Node2D
2
3 func _process(delta):
4     if Input.is_action_just_pressed("ui_accept"):
5         $CPUParticles2D.emitting = true
6
```

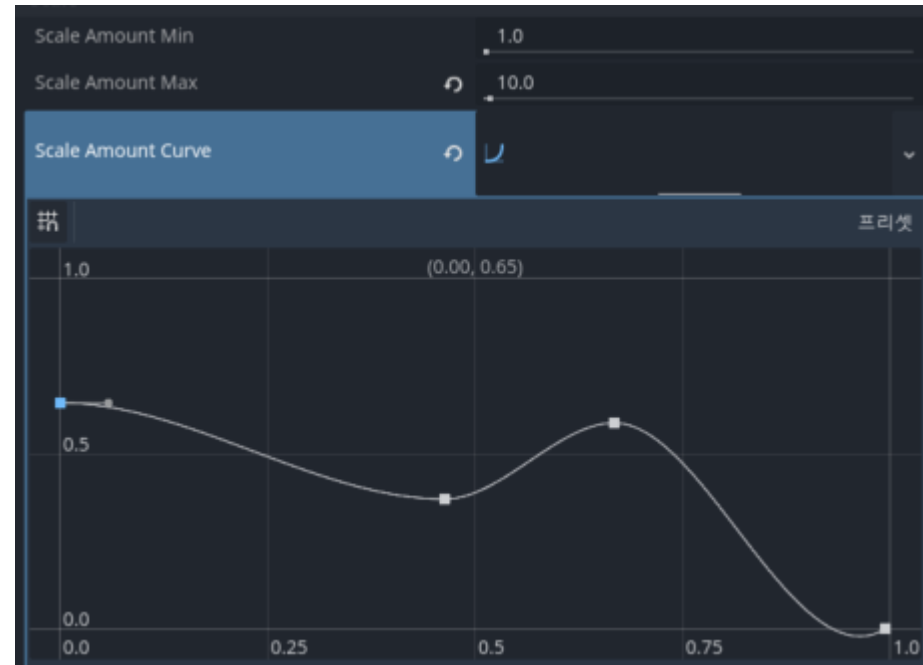

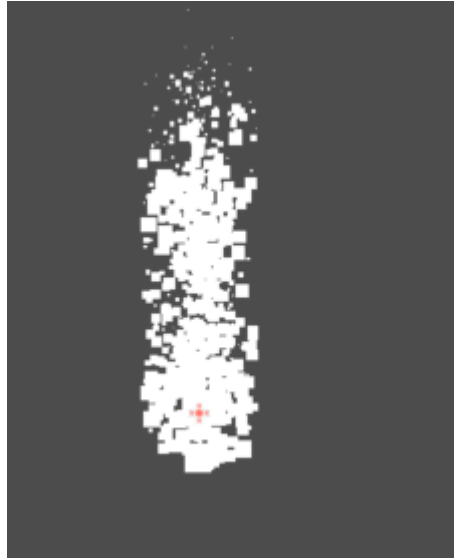

# 불을 만들어 볼까

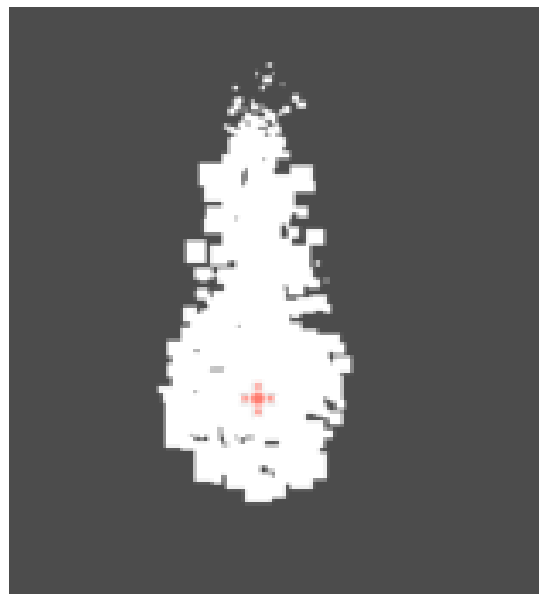

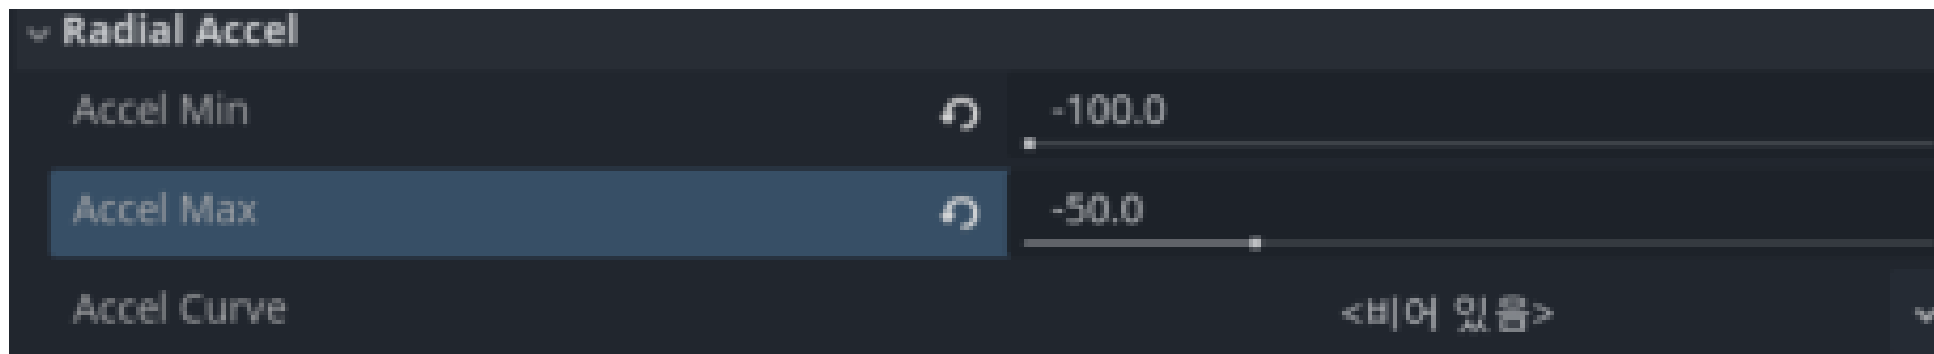

# 불과 같이 조정해 보자

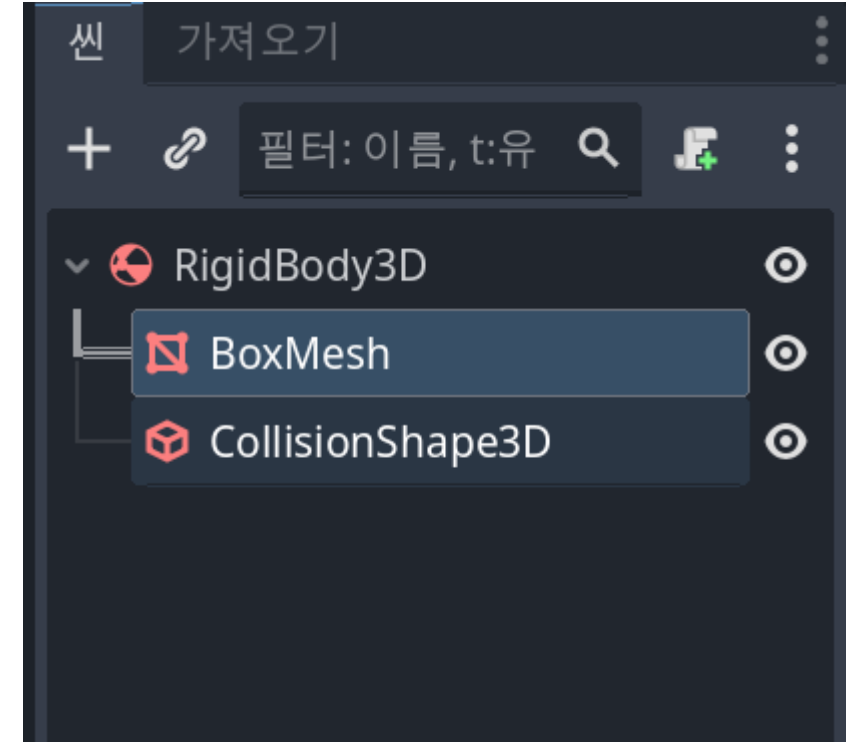

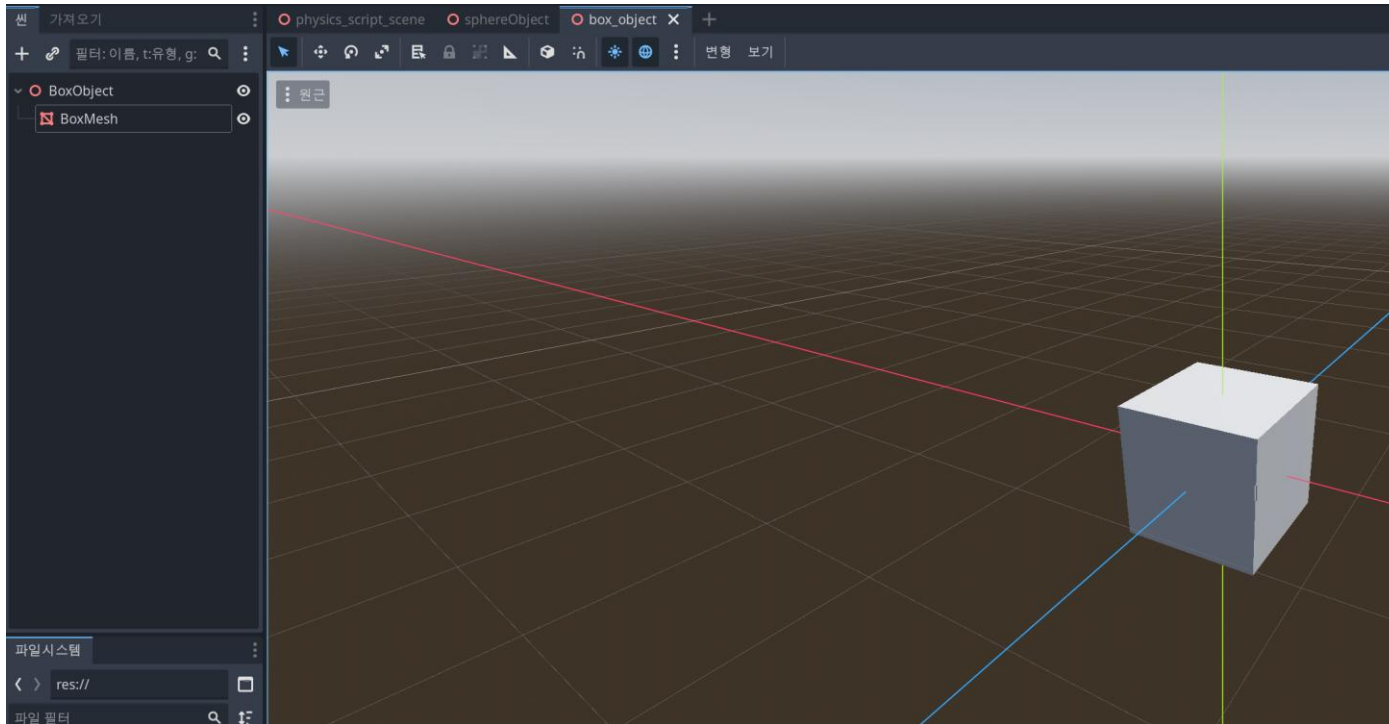

Amount?

# 불꽃을 모으고 싶으면

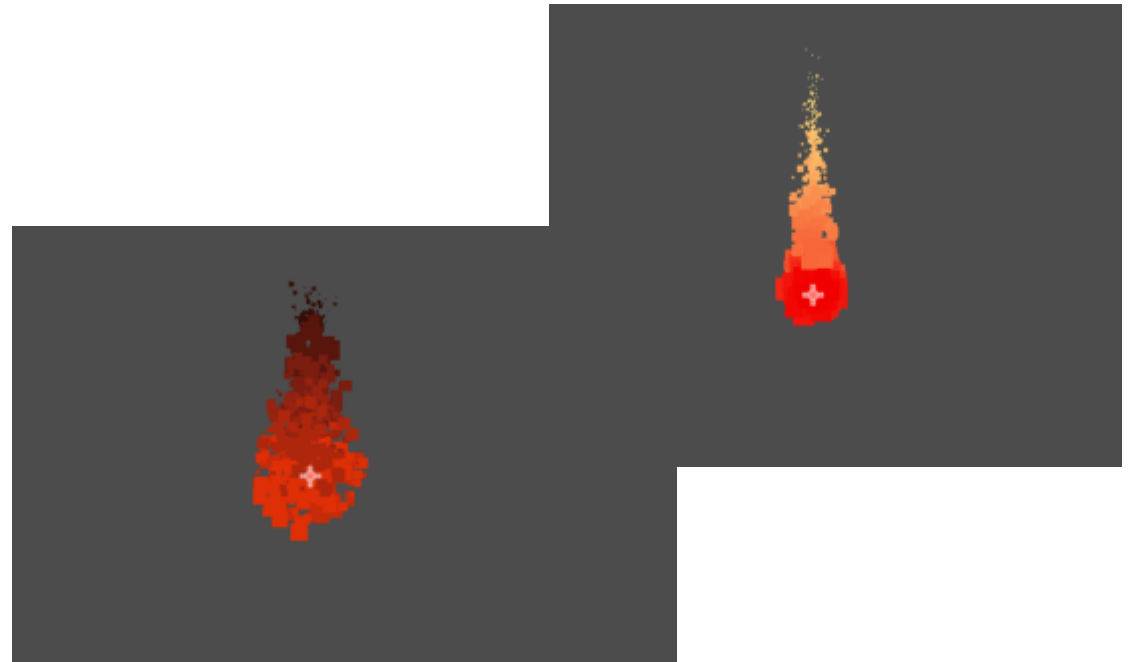

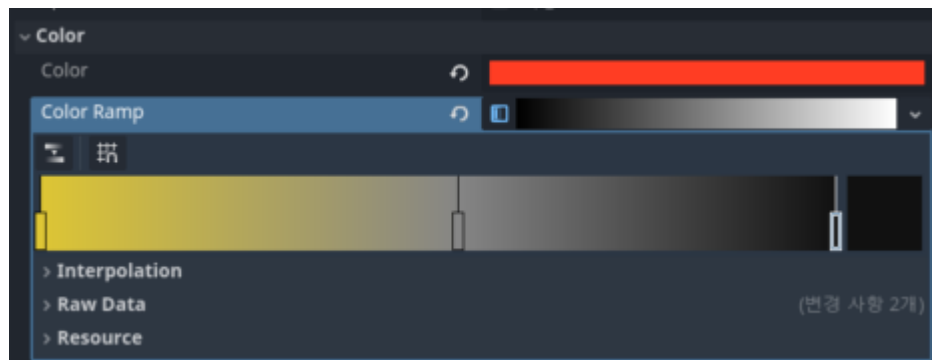

# 박스를 만들어 보자: box\_object.tscn 으로 저장

루트 노드가 RigidBody3D가 되도록 생성

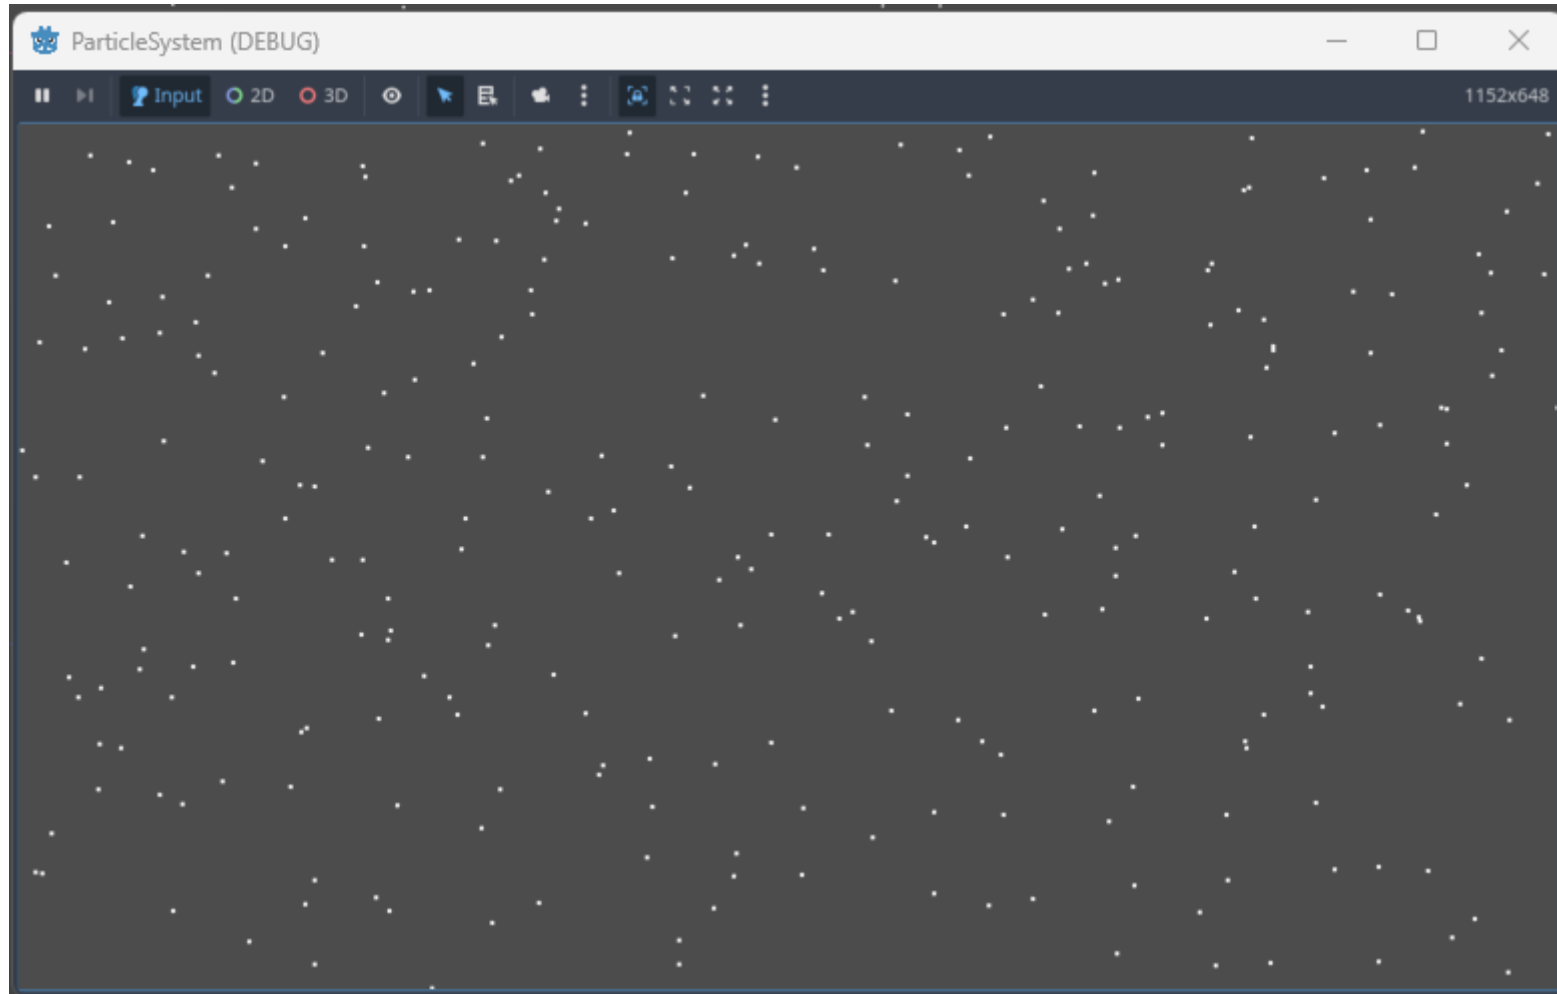

# 색상은

# 가지고 놀기

```
1  extends Node2D
2
3  func _process(delta):
4      if Input.is_action_just_pressed("vi_accept"):
5          $CPUParticles2D.emitting = !$CPUParticles2D.emitting
6
```

# 비를 만들어 보자

보송보송 눈이 내리게
